

Zero-shot Synthesis with Group-Supervised Learning

ICLR 2021

Yunhao Ge, Sami Abu-El-Haija, Gan Xin, and Laurent Itti

Agenda

- Motivation 
 - Visual Cognition: Human --> Machines
- Problem Statement and Approach
- Experiments
 - Qualitative results
 - Quantitative results

“Envision” a *novel* visual object

Group-Supervised
Learning

Zero-shot synthesis

Knowledge
Factorization[1]

Controllable
Disentangled
Representation Learning

Group-Supervised learning (GSL) allows us to **decompose** inputs into a **disentangled representation** with **swappable** components, that can be **recombined** to synthesize new samples.

Controllable Disentangled Representation Learning

Unsupervised

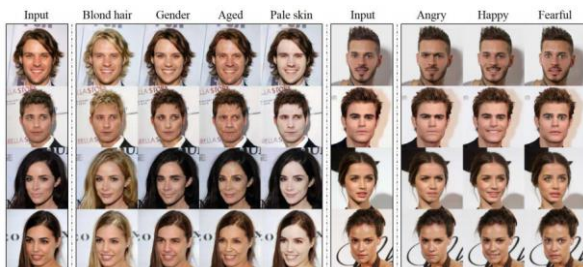

$$\text{loss} = ||x - \hat{x}||^2 + \text{KL}[N(\mu_x, \sigma_x), N(0, I)] = ||x - d(z)||^2 + \text{KL}[N(\mu_x, \sigma_x), N(0, I)]$$

VAE DP Kingma, et al. 2016

☹️ Controllable

Supervised

StarGAN Choi, Yunjey, et al. 2018

😊 Controllable

☹️ Global semantical consistency

☹️ Easy implement and training

Supervised

ELEGANT Xiao, T. et al. 2018

😊 Controllable

😊 Global semantical consistency

😊 Easy implement and training

Supervised

Group-Supervised Learning (Ours)

Agenda

- Motivation
 - Visual Cognition: Human --> Machines
- Problem Statement and Approach 
- Experiments
 - Qualitative results
 - Quantitative results

Given: Dataset --> Multi-graph

Letter : A
Size : large
Font color : red
Background color : orange
Font : Abadi

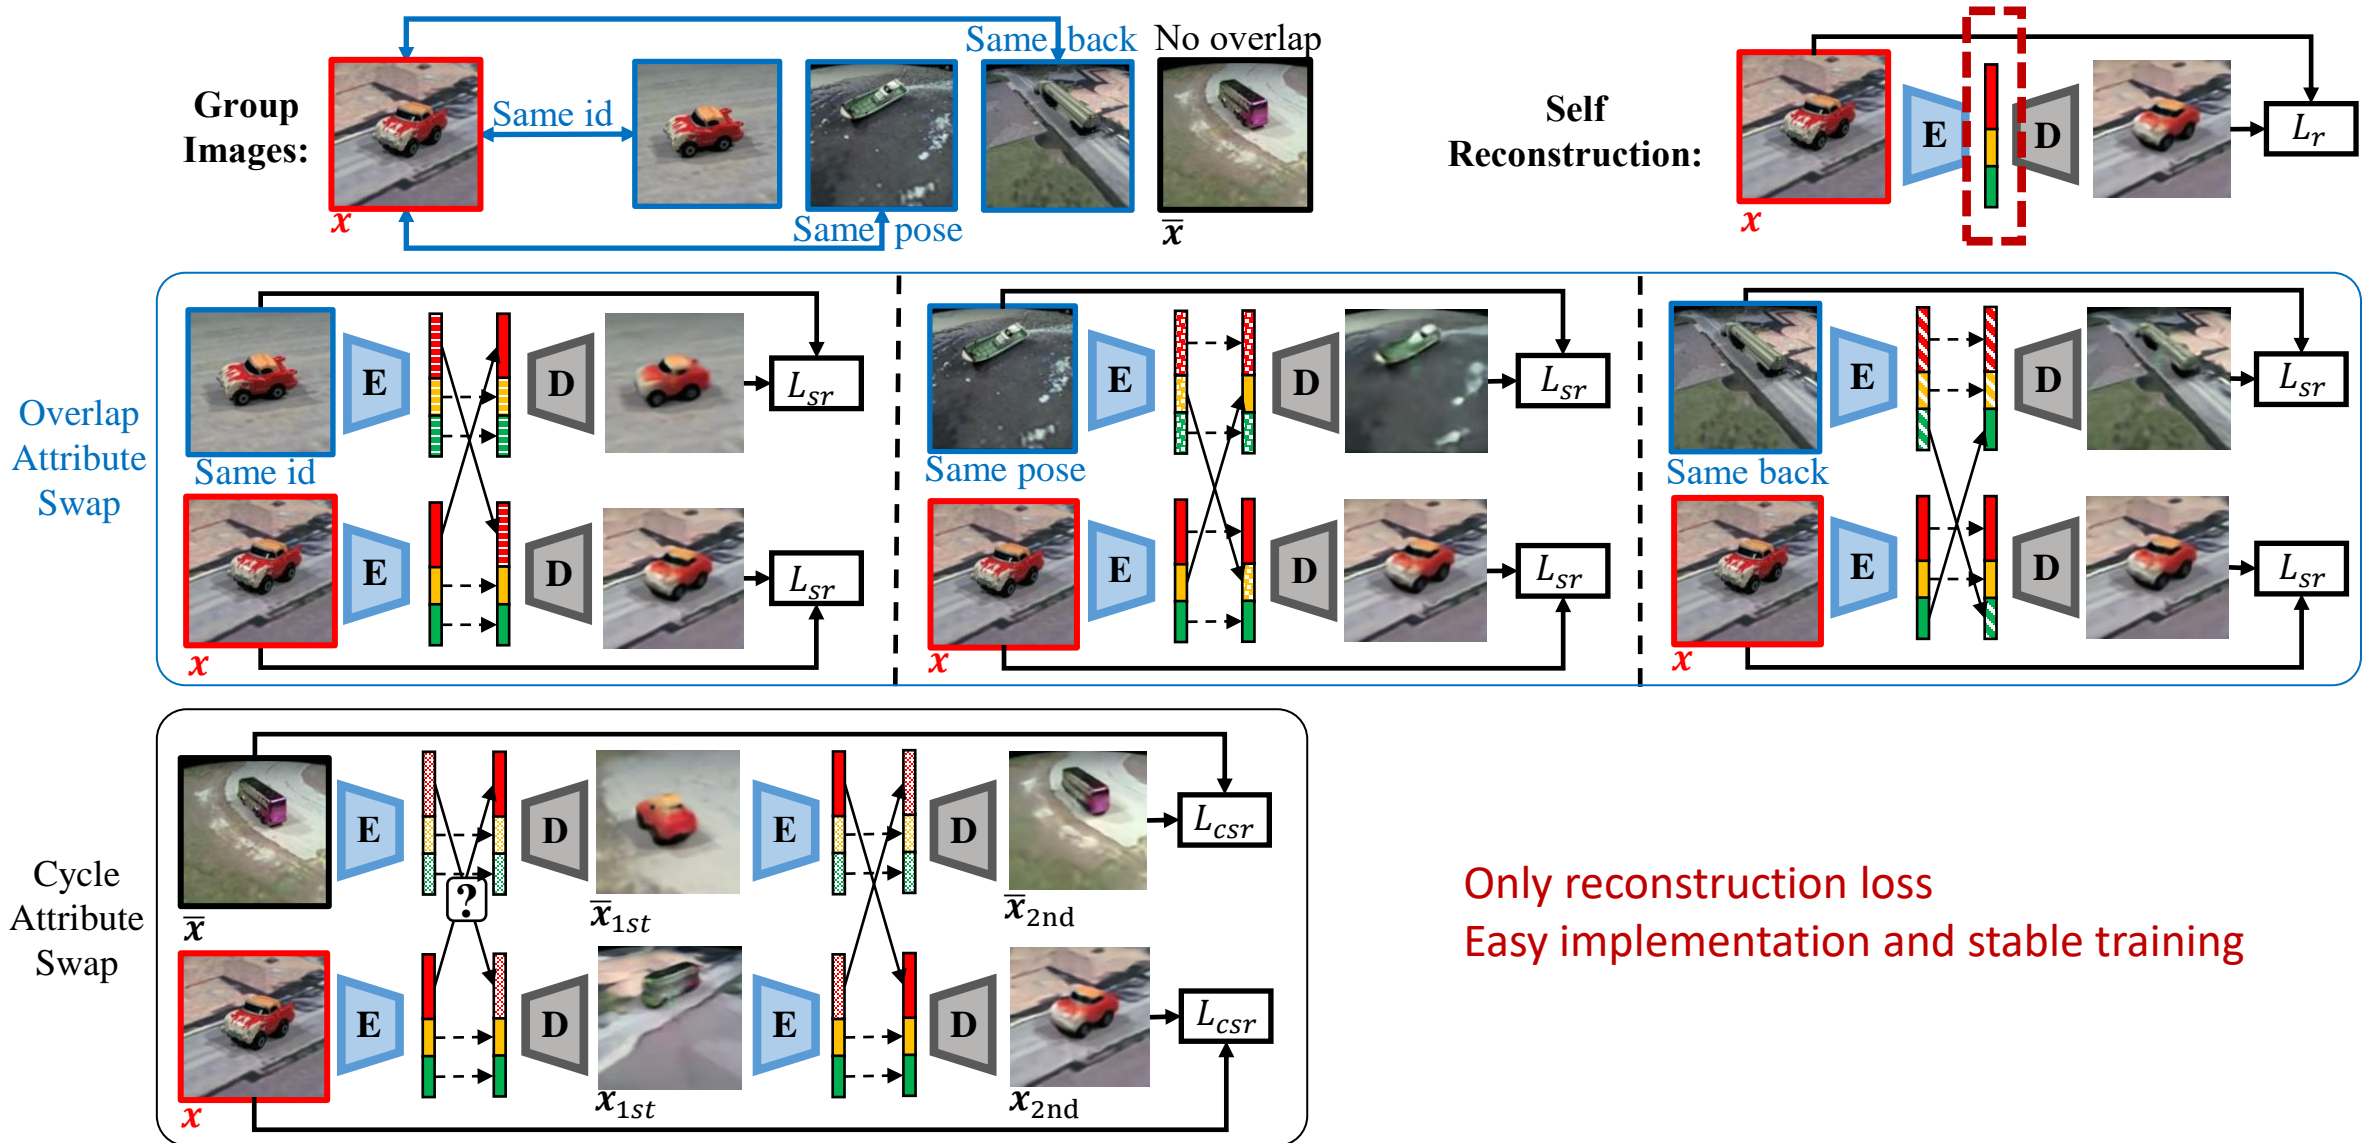

Goal: **Controllable** Synthesis by Disentangle Representation Learning

Group-Supervised Learning

Controllable Disentanglement: (1) Predefine partition (2) Mine the similarity by **attribute swap**.

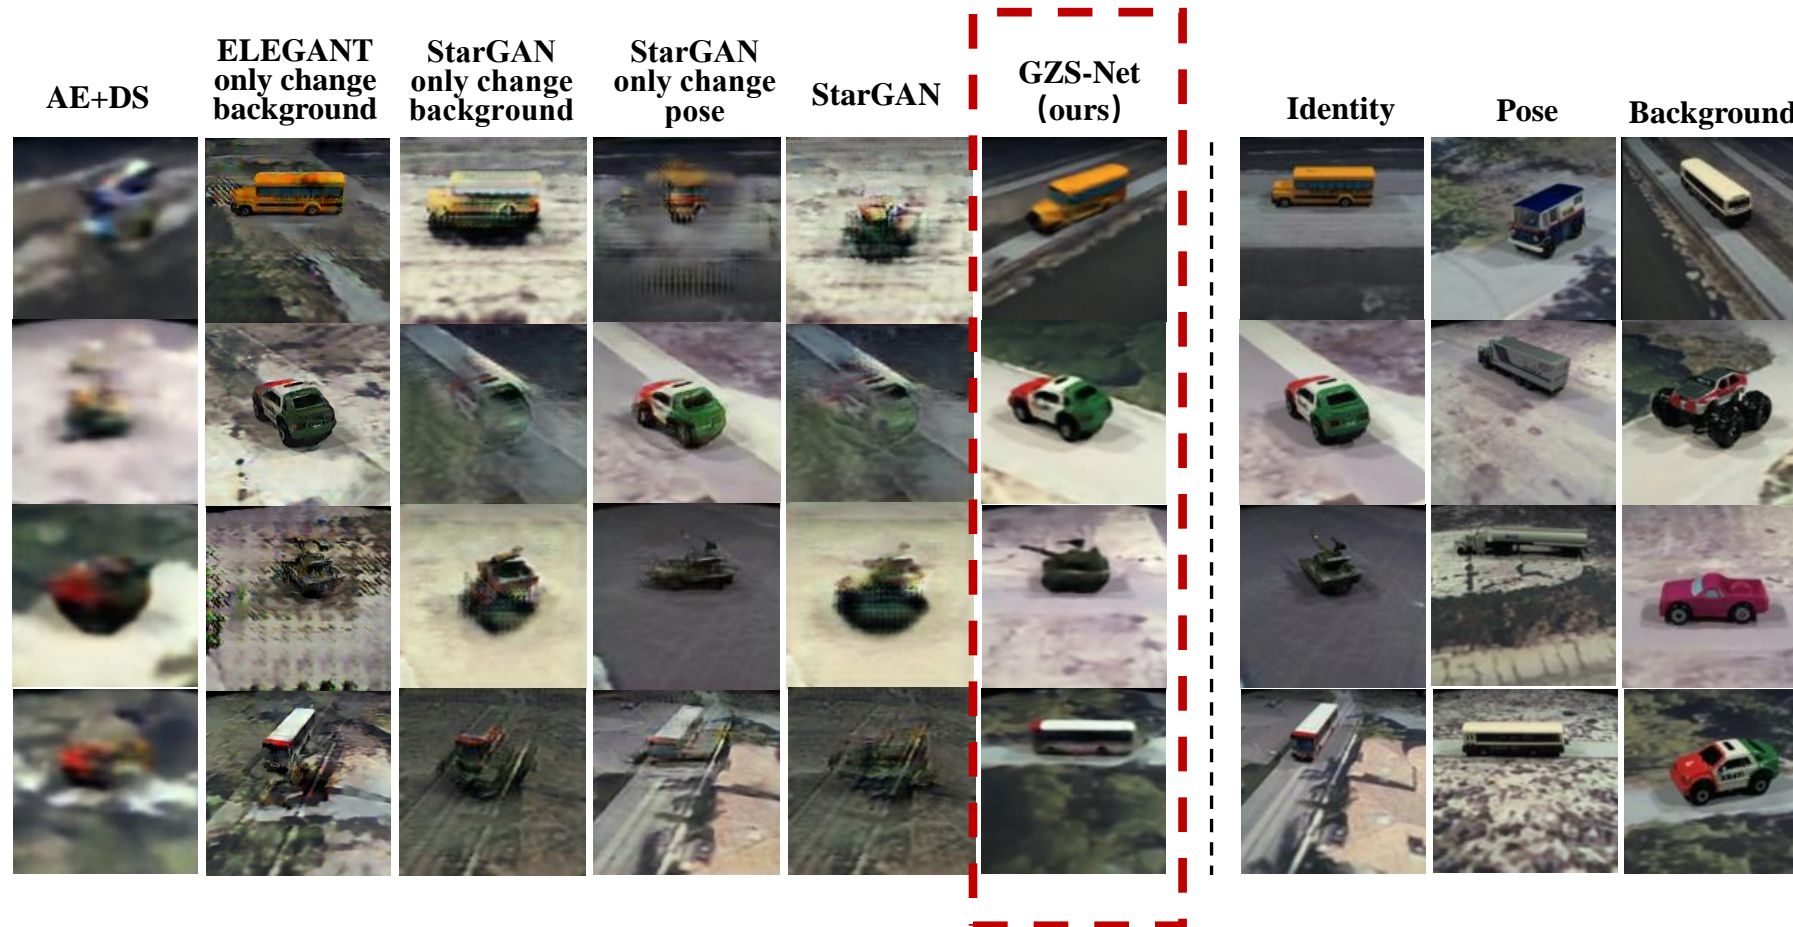

Only reconstruction loss
Easy implementation and stable training

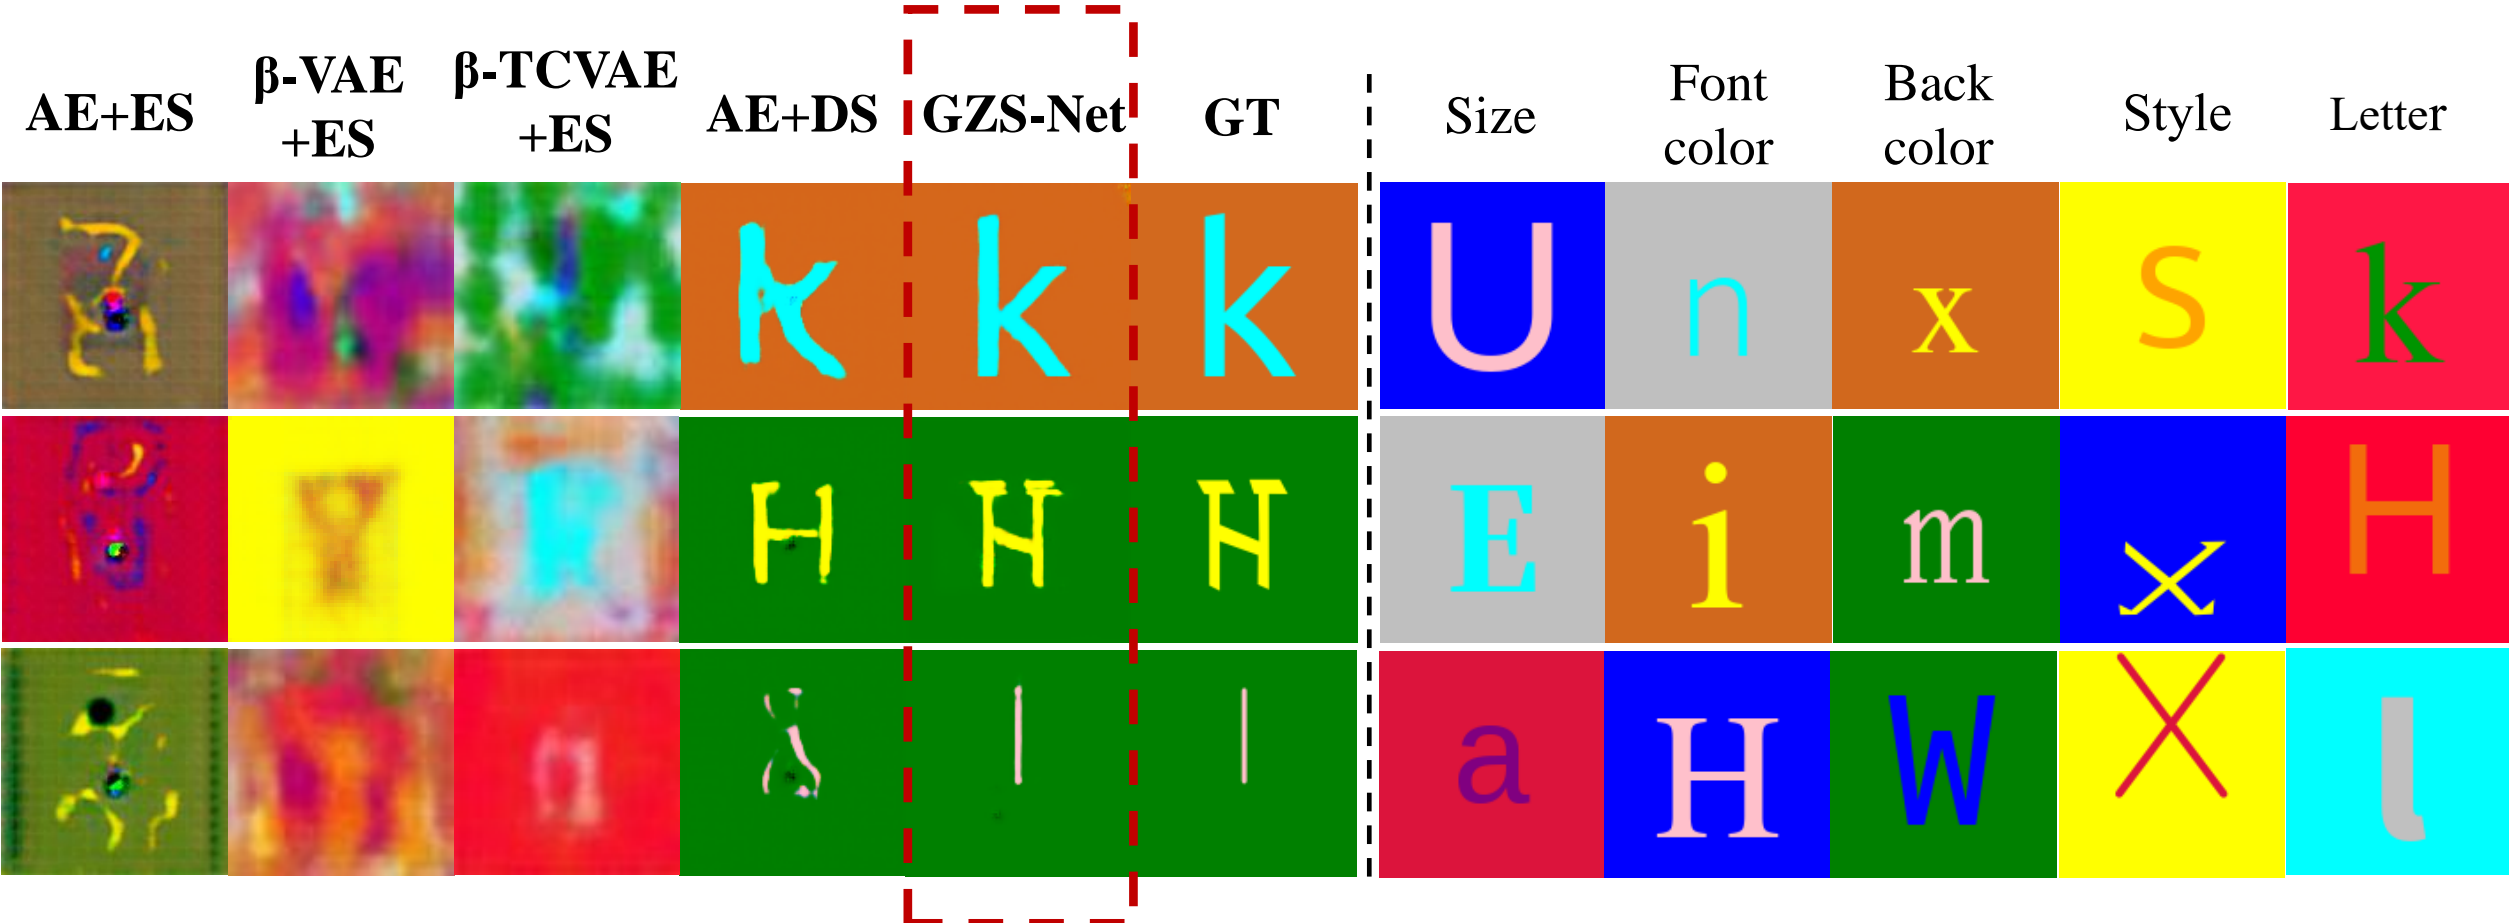

Agenda

- Motivation
 - Visual Cognition: Human --> Machines
- Problem Statement and Approach
- Experiments 
 - Qualitative results
 - Quantitative results

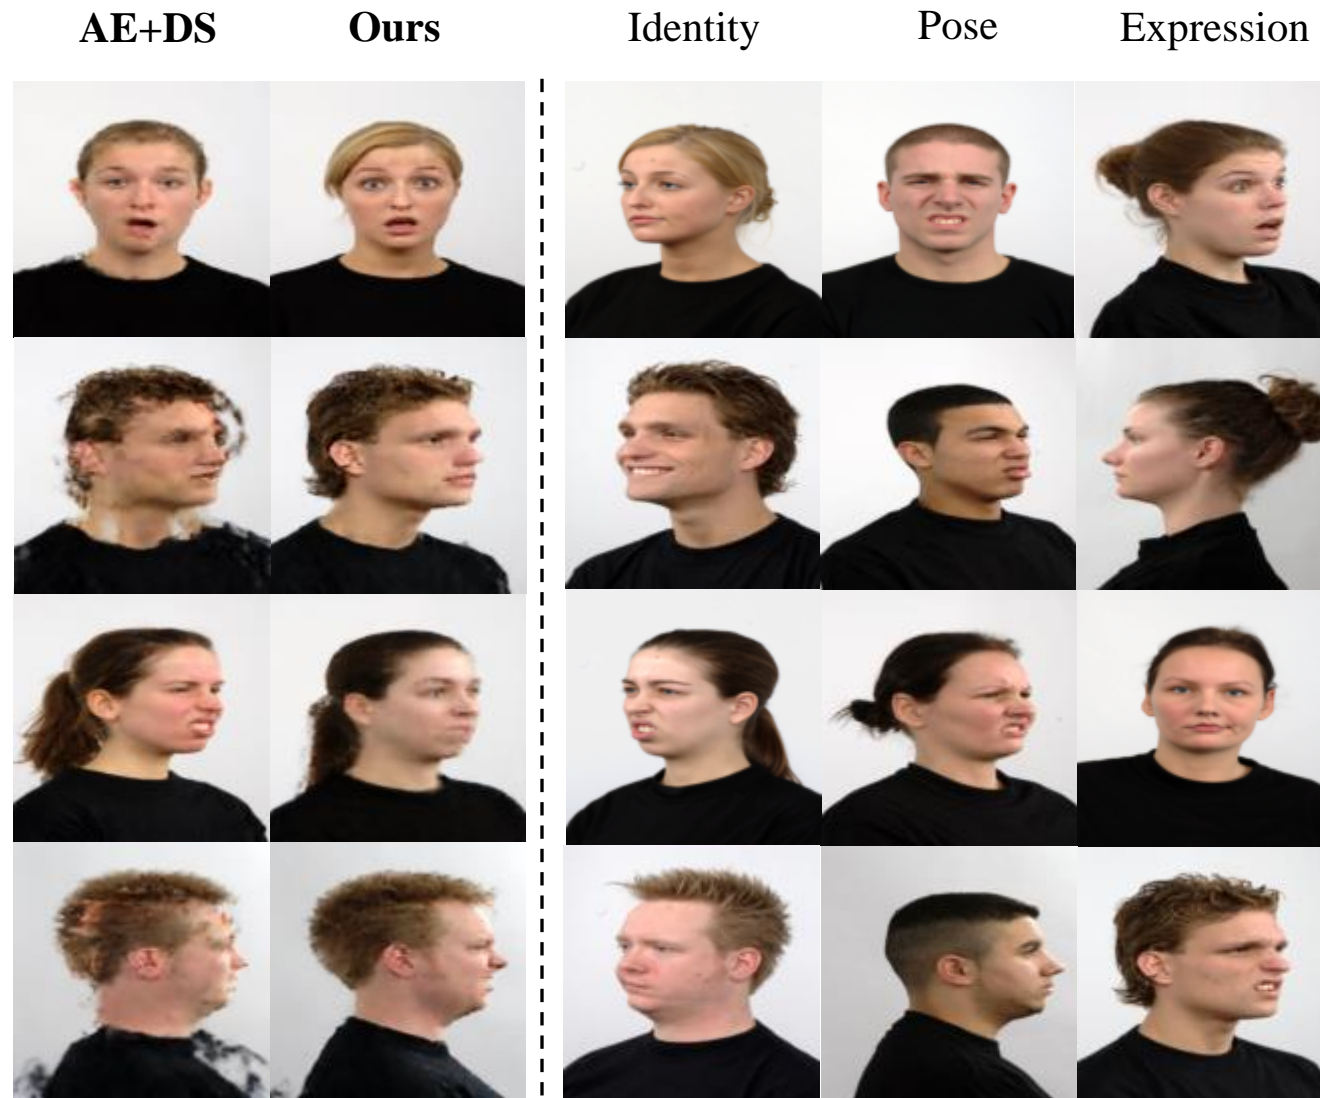

Qualitative Results 1 --- iLab-20M [1]

Qualitative Results 2 --- Fonts

Qualitative Results 3 --- RaFD [1]

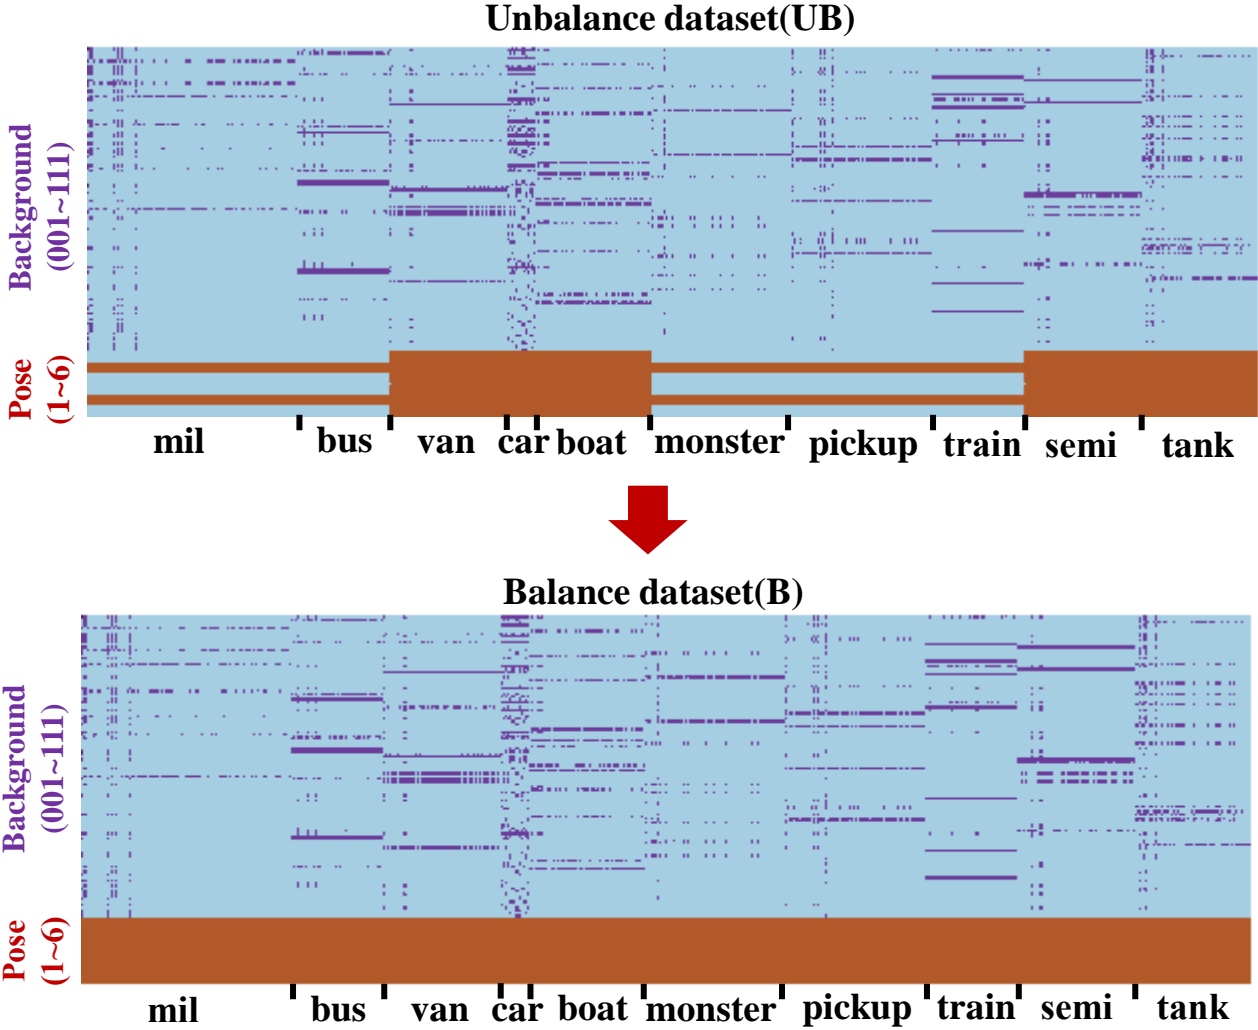

Quantitative Results 1 --- Disentanglement analysis

Table 1: Disentangled representation analysis. Diagonals are bolded.

	GZS-Net					Auto-encoder					AE + DS					β -VAE + ES					β -TCVAE + ES				
$\mathcal{A} (\mathcal{A})$	<u>C</u>	<u>S</u>	<u>FC</u>	<u>BC</u>	<u>St</u>	<u>C</u>	<u>S</u>	<u>FC</u>	<u>BC</u>	<u>St</u>	<u>C</u>	<u>S</u>	<u>FC</u>	<u>BC</u>	<u>St</u>	<u>C</u>	<u>S</u>	<u>FC</u>	<u>BC</u>	<u>St</u>	<u>C</u>	<u>S</u>	<u>FC</u>	<u>BC</u>	<u>St</u>

Quantitative Results 2 --- Data Augmentation

Dataset	UB	B	S-B	A-UB	Test
Source	real	real	GZS-Net synthesized	Traditional augmented	real
Numbe	25149	37417	37395	37395	37469
Overall Accuracy on Test	56.5	64.4	63.5	56.6	

Font dataset

Primary motivation : allows fast testing and idea iteration, on disentangled representation learning and zero-shot synthesis.
